

BUSINESS MANAGER – BUILDING ENERGY EFFICIENCY

Bosch Projects, a member of the multi-disciplinary Bosch Holdings, founded in 1961, has an opportunity for a Business Manager: Building Energy Efficiency. This position will be based in Durban and will report to the Director: Renewable Energy.

This is a permanent position in a dynamic growth environment which offers great opportunities for individuals who are passionate about energy efficiency and are able to secure renewable energy projects in a challenging environment.

This successful candidate will support the Energy Business Manager with further business development in respect of the following typical Commercial and Industrial Building Energy Efficiency sector-specific technologies:

- Rooftop solar PV power systems
- Solar/Vacuum Pump Water heating systems
- Power Quality Management systems
- Rainwater harvesting systems
- Grey water utilization systems
- HVAC systems optimization
- Lighting systems optimization

The ideal Candidate should:

- Have a suitable degree together with at least six years of appropriate marketing and business development experience coupled with an ability to demonstrate strong interpersonal skills
- Be a confident analytical thinker with strong ability to understand the client interface dynamics as well as the techno- commercial requirements
- Be able to demonstrate a mature approach towards developing business opportunities with potential clients whilst being self-motivated with the ability to work effectively as an individual and in a team-orientated structure
- Be prepared to travel within and outside RSA borders

Applications, together with details of contactable references and supporting documents should be forwarded to:
